

# Who wants color in their curriculum?

## Facts About Color in School

- ✓ Kids are introduced to a monochrome world in grade school
- ✓ Schools prefer color but are forced to use black and white
- ✓ Schools have been convinced that use of color is prohibitive

## Color *IS* Affordable

In a world where we have kids growing up with high definition color phones, tablets, monitors and TV, schools cannot afford to keep handing out dulled, black and white class material. It doesn't get kids very excited to be in class or to do their homework. Inkjet makes it possible to have color become part of the curriculum without blowing the school printing budget.

-  Low cost color
-  High speeds up to 120 pages per minute
-  Heatless printing for flat, reliable output
