NEWS ABOUT THE ENVIRONMENT

Riso Energy is providing you with periodic environmental information to let you know how the generation and production of electricity affects the environment.

These statements let you know which fuels the suppliers we purchase your energy from used to generate electricity, the air emissions that resulted, and how those emissions compare to statewide averages. Below is information on sulfur dioxide and nitrogen oxides, both key pollutants that contribute to acid rain and smog, and carbon dioxide, which contributes to global climate change. Depending on fuel sources, size and location, the generation of electricity may also result in other public health, environmental and socioeconomic impacts not disclosed here.

Complete information is available in the Public Service Commission brochure Environmental Disclosure Label. Get your copy by calling 1-800-942-7476, or visiting RisoEnergy.com
